

**TITLE: OFFSHORE INSTALLATION OF ANCHOR PILES AND MID WATER  
ARCHES FOR FPSO CENDOR PROJECT**

Muhammad Zulhilmi Zaidan

MTC Engineering Sdn. Bhd

**ABSTRACT**

Offshore installation works is a challenging and time constraint activity. Limited by short weather windows, the slightest delay could cause the opportune moment to simply pass by. Time lost to weather standby mode means hundred thousands of dollars down the drain. With the weather being the governing factor, a precise and thorough procedure must be in place for the smooth execution of any offshore installation works. A detailed methodology coupled with the necessary tools may still not be enough if the team does not have the ingenuity of in situ problem solving. The aim of this presentation is to share the procedures and issues faced during the installation of the anchor piles and the mid water arches. Also, it aims to identify what we can learn and the mistakes to be avoided for future undertakings.
